

IN THE CLAIMS:

Please cancel Claim 45 without prejudice or disclaimer of subject matter.

Please amend Claims 39, 46, 48, 54 and 56, and add new Claim 66 as follows:

1. to 38. (Cancelled)

39. (Currently amended) A reception apparatus, comprising:

a) reception means for receiving a television signal;

b) input means for entering first program information and second program information data, each relating to said television signal which indicate information relating to a same program, wherein said first program information data is associated with main program information and said second program information data is associated with detailed program information;

c) discrimination means for discriminating whether the first program information data and the second program information data relate to a same program  
~~designation means for designating desired program information from said first program information data and said second program information data entered by said input means;~~

d) integration means for producing integrated program information data for the same program, wherein the integrated program information data comprises the main program information associated with the first program information data and the detailed program information associated with the second program information data, and wherein the detailed program information complements the main program information by extracting program data from said second program information data and complementing said first

~~program information data with said extracted program data, based on the desired program information designated by said designation means; and~~

e) display means for displaying integrated program information based on said integrated program information data in a display frame.

40. to 45. (Cancelled)

46. (Currently Amended) An apparatus according to claim 39 [[45]], wherein said second program information data include at least one of a representative scene of said program, a text explaining the outline of said program, name of an acting person, title of a music and a classification of said program.

47. (Previously Presented) An apparatus according to claim 39, further comprising:

instruction means for instructing a producing operation by said integration means; and

input control means for controlling said input means in such a manner as to enter said second program information data in response to the instruction by said instruction means.

48. (Currently Amended) An apparatus according to claim 47, further comprising:

setting means for setting a range of the producing operation by said  
integration means;

wherein said input control means is adapted to control said input means in  
such a manner as to enter said second program information data corresponding to the range  
set by said setting means.

49. (Previously Presented) An apparatus according to claim 39, further  
comprising:

instruction means for instructing a producing operation by said integration  
means; and

setting means for setting a range of the producing operation by said  
integration means;

wherein said integration means is adapted to produce said integrated  
program information data corresponding to the range set by said setting means.

50. (Original) An apparatus according to claim 49, wherein said setting  
means is adapted to set at least one of a time zone, a channel and a program.

51. (Previously Presented) An apparatus according to claim 39, wherein said  
integration means is adapted to produce said integrated program information data in a time  
zone close to the current time.

52. (Previously Presented) An apparatus according to claim 39, wherein said integration means is adapted to produce said integrated program information data relating to a currently observed program.

53. (Previously Presented) An apparatus according to claim 39, further comprising:

designation means for designating a range of the producing operation by said integration means within the information relating to said first program information data and display by said display means;

wherein said integration means is adapted to produce said integrated program information data according to the designation by said designation means.

54. (Currently amended) An apparatus according to claim 53 [[39]], wherein said designation means is adapted to designate at least one of a time zone, a channel and a program.

55. (Previously Presented) An apparatus according to claim 54, wherein said integration means is adapted to produce said integrated program information data in such a manner as to display program information integrating said first and second program information data in a display frame for displaying the information relating to said first program information data and corresponding to the range designated by said designation means.

56. (Currently amended) An apparatus according to claim 53 ~~[[54]]~~, wherein said integration means is adapted to expand a display frame for displaying the integrated program information ~~information relating to said first program information data and corresponding to the range designated by said designation means, and to produce said integrated program information data in such a manner as to display program information integrating said first and second program information data in said expanded display frame.~~

57. (Cancelled)

58. (Previously Presented) An apparatus according to claim 39, further comprising:

search condition setting means for setting a search condition;

wherein said integration means is adapted to execute search in said second program information data according to the search condition set by said search condition setting means, and to produce the integrated program information data based on the result of said search.

59. (Original) An apparatus according to claim 58, wherein said search condition includes for example name of an acting person, title of a music, title of program, a classification of program etc.

60. to 64. (Cancelled)

65. (Previously Presented) An apparatus according to Claim 39, wherein said first program information data and said second program information data are input by a same broadcast system.

66. (New) A method for processing program information, the method comprising:

receiving a television signal;

entering first program information and second program information data, each relating to said television signal, wherein said first program information data is associated with main program information and said second program information data is associated with detailed program information;

discriminating whether the first program information data and the second program information data relate to a same program;

producing integrated program information data for the same program, wherein the integrated program information data comprises the main program information associated with the first program information data and the detailed program information associated with the second program information data, and wherein the detailed program information complements the main program information; and

displaying integrated program information based on said integrated program information data in a display frame.
